Its high strength and quick set time make Gorilla Super Glue the go-to adhesive for a variety of household projects. Developed for long-lasting repairs in an instant, the clear glue dries in 10-45 seconds. Our Super Glue is formulated for increased impact resistance to handle bumps and drops. We call it Impact-Tough™ because the reliable bond stands up to wear and tear. In addition to Gorilla Super Glue's high-performance cyanoacrylate formula, we've added an anti-clog cap with a metal pin inside ensuring an airtight seal for maximum reusability. It's Gorilla tough, every time

Working Hands Moisturiser

£9.99

O'Keeffe's was started more than 25 years ago by a woman named Tara O'Keeffe, in an effort to help her Dad, Bill with his dry, cracked hands. Bill was a rancher, and he was diabetic. He had pretty bad hands that would crack and split and Tara couldn't find anything that would work for him. So Tara, being a pharmacist, brought home ingredients from the pharmacy and made what is now Working Hands, in her own kitchen. Designed for her father Bill, that's why the product looks the way it does today. Even the rubber on the jar lid is inspired by the handle of a hammer. Little by little, word got out, and people started asking for it and buying it. Fast forward to today, and O'Keeffe's has a loyal following of not just people who work outdoors, but also nurses, tEachers, mechanics, diabetics, and people with skin conditions such as Eczema. In addition to great products, we strive to be a great company for our employees. The Gorilla Glue Company, which owns the Gorilla Glue® and O'Keeffe's® brands, is family-owned and operated and prides itself on its family atmosphere and quality products. Our employees are our number one asset, and our company is dedicated to providing a healthy work culture centered on our core values. In fact, we've been selected as a Top Place To Work in Cincinnati for 12 years in a row.

Agli E-BRite

from £4.99

Aglia-e Brite are new spinners that show two major developments -the intensity of the chromatic signal of their blade and the attractiveness of the soft rubber colored bead mounted on their hook. Their chromatic intensity is based on the action of the new Brite pigments of the blade. They are UV-enhanced and applied on a Silver Mirror under layer, which reflects and intensifies the colored radiation they emit. When pulsating under water they create a powerful burst of color that will catch the eye of the predatory fish and prompt their attack reflex.The soft bead e-Attractoris an appetizing sphere, placed on the hook it gives consistency to the Brite of the blade for the approaching, out of its cover, predatory fish, and constitutes an attractive target for the final bite.
