WWW.ASSOFISHINGLINE.COM

Pursuing excellence since 1973.

Under the skills and experiences acquired in almost 50 years of work, **ASSO** is able to offer a wide range of fishing lines in nylon or fluorocarbon and PE braids, available on the global market.
Every day, consumers from more than 80 countries rely on ASSO, testifying the company's ability to intercept users' technical needs and satisfy them through the launch of new products. The ASSO range includes products with cutting-edge technical characteristics able to meet the needs of the most advanced angler, through the offer of a targeted product that meets the specific needs of each fishing technique. In addition to the high-end multipurpose products, specific lines are available dedicated to the various fishing techniques including fly fishing, carp fishing, professional longline fishing, trout area, ajing and mebaru.

The evolution of Asso fishing lines
The evolution of the ASSO range of fishing lines is marked by a series of milestones in the history of fishing monofilaments:

Early 80s
It is the official start of the evolution of the ASSO range, a decisive step that has made a great contribution to the history of fishing monofilaments.

Late 80s
These were the years when the Italian market welcomed ASSO DI CUORI, the first innovative fishing monofilament wholly made of fluorocarbon, a real innovation for the market at that time.

Early 90s
Gruppo DP introduced ASSO DI QUADRI, a revolutionary monofilament with no memory, which raised the quality standards of the time in Italy and in many European and non-European countries.

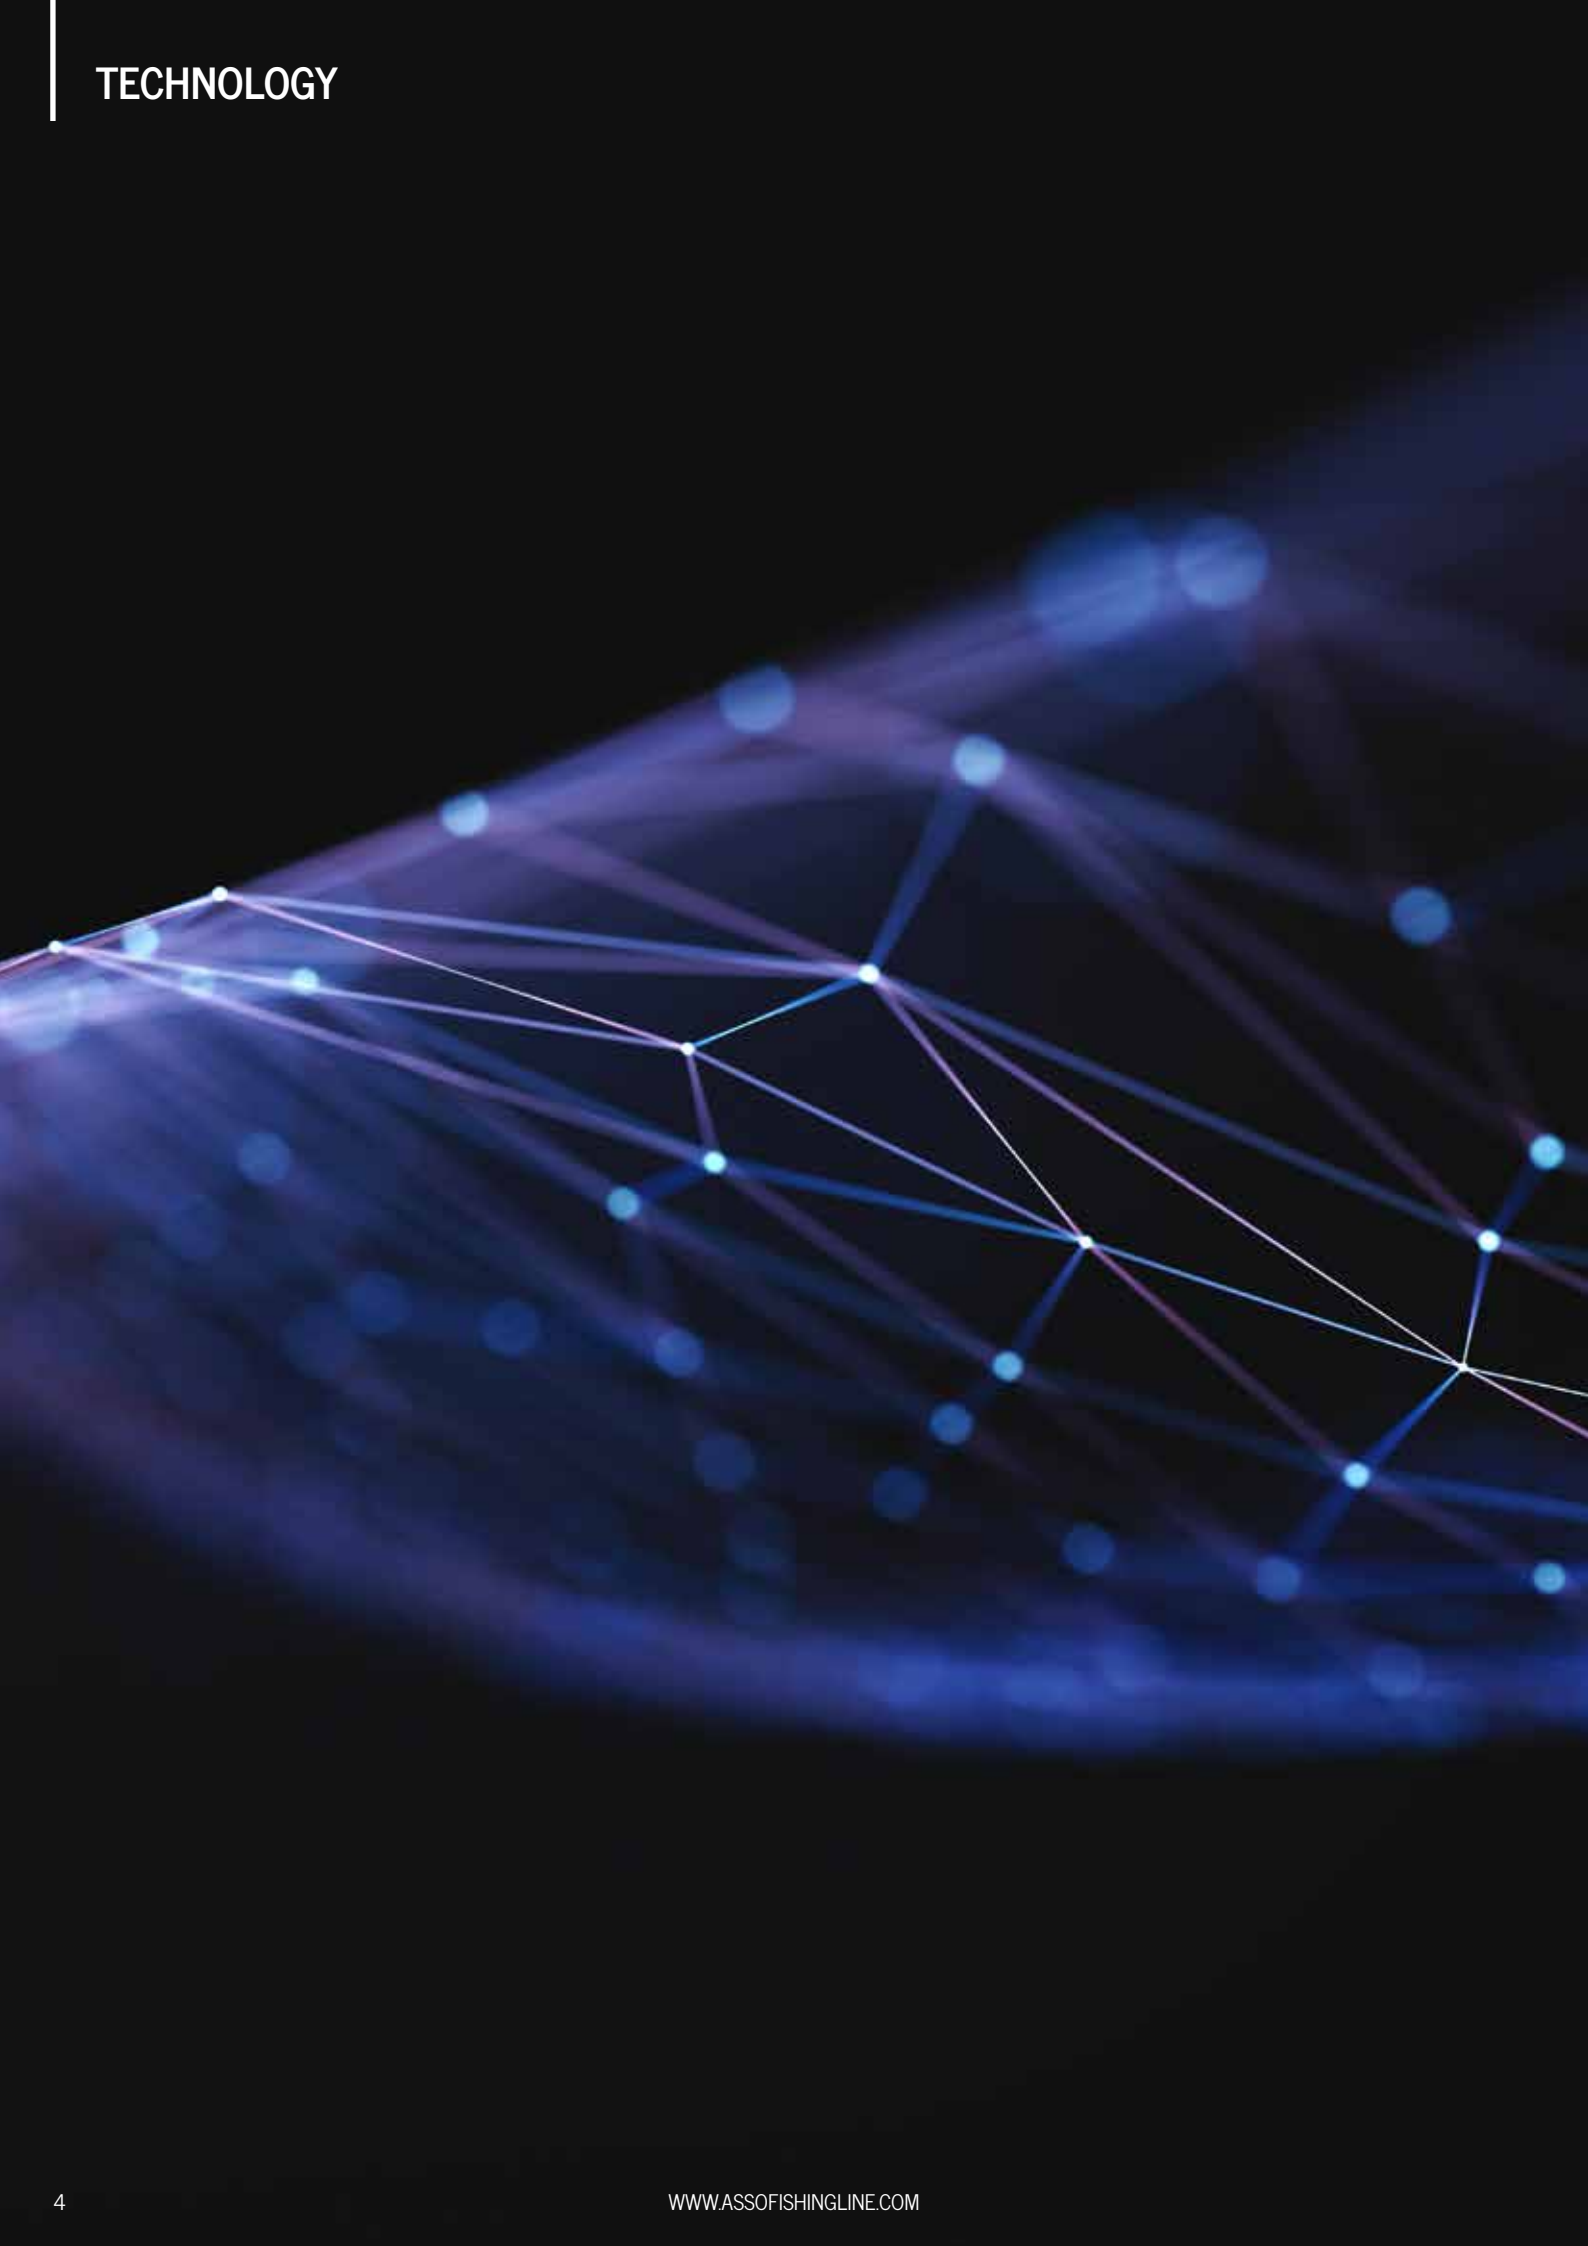

Today
The entire production is oriented to the technological excellence. Together with specific products for traditional techniques such as fly fishing, carp fishing and surf casting, others have been developed to meet the most modern trends in the sector such as TROUT AREA, AJING and ULTRA LIGHT FISHING.

Asso product range
The Asso range offers products which stand out for their top level technical features, designed to meet the most sophisticated fishing requirements. Asso offers a wide catalogue of monofilaments in nylon, fluorocarbon and highly specialised PE braided lines. ASSO lines distribution develops on global scale in a capillary manner, through Gruppo DP's network, which is active in 5 continents and more than 80 countries.

ASSO FISHING LINE

TECHNOLOGY

Asso**TECHNOLOGY**

Attention to technological excellence has always been a constant in the history of the ASSO range, which today offers one of the most complete ranges of nylon or fluorocarbon and PE braided fishing lines available on the global market. In addition to top quality multi-purpose items, other specific lines dedicated to the various fishing techniques are available, including fly fishing, carp fishing, professional longline fishing, trout area, ajing and mebaru.

Each product has specific features which go beyond the data summarised by the diameter and the breaking strength. Our icon system, which can be accessible on the product sheet, allows you to find and fully understand any ASSO fishing line specific feature.

The product safety sheets (with important safety information) are available on-line
www.gruppodp.com/safety

TECHNOLOGY

 **FLUOROCARBON COATED**	Fluorocarbon coating provides the monofilament with an exceptionally smooth and durable surface, making it nearly completely waterproof and abrasion-resistant. The waterproofness keeps the strength unaffected even when the line gets wet, unlike the nylon monofilaments which instead may have a decay up to 15%. Fluorocarbon coated monofilaments combine most of the revolutionary features of fluorocarbon with the excellent dynamic and breaking strength features of nylon, thus constituting a "bridge" product that tends to make the best use of the characteristics of both materials, generally at a lower price compared to pure fluorocarbon monofilaments.
 **PARALLEL SPOOLING**	The parallel spooling system allows to optimally preserve the physical and mechanical features of the monofilaments. The spooling takes place by means of high precision numerical control machines, overlapping the coils without twisting them, at moderate constant speed and applying a reduced tension to the fibers. The risk of abrasion, tension and crushing is therefore reduced to a minimum.
 **HIGH ABRASION RESISTANCE**	This line features a particularly consistent surface, which guarantees high abrasion resistance in the event of friction on hard materials such as rocks, trees and obstacles of various kinds or fish bites.
 **CAMOUFLAGE MULTICOLOR**	Camouflage multicolor lines offer a special camouflage color, which consists of alternating short segments of line with different coloring inside the spool. This coloring, intentionally heterogeneous and irregular, makes the line less visible in water.
 **SINKING**	Sinking lines feature a high specific weight, which guarantees a greater and more rapid sinking. It also ensures a vsery precise fishing action in presence of strong winds.
 **FLOATING**	Floating lines have a reduced specific weight, which slows its sinking in water.
 **HIGH VISIBILITY**	High visibility lines have a special "solid", fluorescent or particularly lively color that enhances the visibility of the line outside the water, and makes them particularly suitable for night or low light fishing conditions.
 **LOW VISIBILITY**	These Fluorocarbon or Fluorocarbon coated lines ensure maximum invisibility as the refractive index of fluorocarbon is close to that of water. A good outcome in terms of invisibility is also obtained with the multicolor colouring.
 **HIGH STRETCH**	High stretch lines are excellent shock absorbers and are particularly suitable to be connected as leaders to PE braids to balance their low elongation. They also favour the bite of particularly suspicious fish.
 **LOW STRETCH**	Low stretch lines provide greater sensitivity while fishing and better strikes.
 **SOFT**	Soft lines have a tension-free consistency with a low mechanical memory and, generally, a high smoothness.

 **STIFF**	Stiff lines provide greater abrasion-resistance and lower stretch. If used as leaders, they allow an excellent arrangement of the bait.
 **3-PLY BRAID**	The braid is made from three independent fibers braided together so as to ensure optimal density and a surface that is as homogeneous as possible.
 **4-PLY BRAID**	4-ply braid is the standard for fishing braids. This braid is made from four independent fibers, braided together so as to ensure optimal density and a surface that is as homogeneous as possible.
 **8-PLY BRAID**	8-ply braid is a cutting-edge braiding technology applied to fishing lines. The high number of fibers used, 8 instead of the traditional 4, guarantees, with the same diameter, a greater compactness of the braid that enhances its softness and smoothness.
 **FOR LEADERS**	Leader lines feature different characteristics according to the fishing technique used. They guarantee maximum invisibility according to the material or color used, and feature a high breaking strength and abrasion resistance.
 **FOR REEL**	Reel lines are soft, low memory and smooth tangle-free lines.
 **FOR SHOCK LEADERS**	These lines perfectly absorb kinetic energy while casting. Being tapered lines, they are perfect for linking together the mainline and the leader.
 **FOR REEL + SHOCK LEADERS**	These smooth tapered lines allow to have the correct diameter in the reel and the correct diameter in the leader without knots and interruptions.
 **SMOOTH CASTING**	Smooth casting lines are extremely soft. This great smoothness is given by a special technological treatment.
 **HIGH TENACITY**	High tenacity lines are technologically tested to resist to extremely high breaking strength.
 **NO MEMORY**	These lines have no mechanical memory.

TECHNOLOGY

MICRO DIAMETERS	This special technology allows 100% real and constant micro diameters.
TAPERED STRUCTURE	Lines with tapered structure and variable diameter, generally used as shock leaders. Tapered lines are formed by a variable section of line with a larger diameter, able to better resist the shock of the casting, and by a thin terminal section that matches the fishing line.
IGFA CLASS	Line which meets the IGFA (International Game Fish Association) requirements or designed so that it does not break above the LB category declared in the technical specifications. These products are suitable to run competitions that take place according to IGFA regulations.
UV FLUO	UV light fluorescent lines, perfect for night fishing.

100% FLUOROCARBON	Fluorocarbon is a revolutionary synthetic fiber, with chemical and mechanical properties very different from those of nylon, such as: • the index of refraction of the light close to that of water, which makes it virtually invisible in immersion; • the greater specific weight and higher density compared to a traditional monofilament, which allows it to sink faster and to maintain the fishing position with higher accuracy since it is less sensitive to wind and current; • a low elongation, which guarantees a prompt and sensitive strike; • insensitivity to low temperatures, which allows fishing up to -40 ° C; • exceptional resistance to abrasion thanks to a very durable surface that gives considerable protection against rocks and the bites of more aggressive fish.

WHY CHOOSE FLUOROCARBON?

	High invisibility: because of the closer index of refraction to that of water, It is so invisible that the fish cannot see it in water, they only see the bait!
	More strength in water: Fluorocarbon is waterproof with no water absorption. Fluorocarbon retains 100% of its tensile strength when wet and is also salt proof.
	Great resistance to very low temperatures: anglers can fish at -40°c without any problem.
	Outstanding abrasion resistance: it has a very tough surface offering great protection against rock, brush, snags and sharp toothed species.
	More precision in fishing: as a consequence of its higher weight, it is less affected by tide and wind and remains where cast. Thanks to its natural stiffness, the hooklength stays straight.
	Controlled low stretch: thanks to it, Fluorocarbon has an instant hook setting power.
	Extraordinary sinking speed: its weight, higher than that of the traditional line, makes the fluorocarbon sink quicker and keep the position in the water (less sensitive to the current).

ASSO TOURNAMENT NYLON LINE

FNASDI250

Asso Tournament is a monofilament designed for I.g.f.a. (International Game Fish Association) competitions and has all the features necessary to compete at a high level including: controlled stretch, exceptional abrasion resistance, toughness and knot strength, long life and excellent uniformity of diameter. Particularly suitable for reel.

ASSO DOUBLE STRENGTH ULTRASOFT NYLON LINE

FNASDI230

Asso Double Strength Ultrasoft is a deep-sea fishing line suitable for those looking for softness and improved usability, without compromising high resistance and breaking strength. It features an excellent breaking strength/ diameter ratio and very high transparency thanks to its slightly opaque shade. A wide range of diameters is available, both in spools and hanks. It's multipurpose and suitable for both reel and leaders.

ASSO TRIPLE FORCE NYLON LINE

FNASDI229

Asso Triple Force is a high technology monofilament featuring a very high breaking strength and an extremely hard and tough surface for a very high abrasion resistance level. Its quality is almost unchanged even after many uses in stress conditions. Controlled stretch and great measures make this product complete. Available in two colors, fluo yellow and grey, and also in I.g.f.a contests standards compliant versions. It is multi-purpose and suitable for both reel and terminals.

ASSO INVISIBLE CLEAR 100% FLUOROCARBON

FFASDI120 - FFASDI121

Abrasion resistant fluorocarbon line which ensures a long product life. It has a refractive index tending to zero the first meters under water which guarantees almost total invisibility and which allows to increase the catches even for beginners. The high specific weight ensures to hold the fishing position. Extremely waterproof, it allows you to keep the strength unaltered in any situation. It has a low elongation and is totally insensitive to temperatures even in prohibitive climatic conditions. Especially suitable for leaders.

ASSO 8X PE JIGGING MASTER BRAIDED PE

FTASDI305

Asso jigging master is a 8-ply braided line made with top quality raw material that guarantees its quality and performance over time. It changes color every 10 m, thus allowing to perfectly calibrate the fishing depth. Thanks to the new "round construction" braiding technology, this product presents an incredible and constant roundness, for an improved smoothness and perfect casting. This type of technology ensures an extremely solid braid even after several uses and in presence of any obstacles such as rocks or dense vegetation. Specifically developed for jigging and suitable for reel.

ASSO 8X PE PREDATOR BRAIDED PE

FTASDI303

Asso predator is a 8-ply braid made from top quality raw material which ensures quality and performance over time. The new "round construction" technology provides roundness and high smoothness that guarantee perfect casting. This special technology keeps the braid very solid, even after several uses and in presence of rocks and dense vegetation. It virtually has no stretch and is perfect for heavy fishing such as trolling, drifting, big game, etc. etc. Especially suitable for reel.

ASSO 8X PE EVERGREEN BRAIDED PE

FTASDI300

Asso PE 8X Evergreen is a 8-ply braid produced with top quality raw material which ensures quality and performance over time. The "duracolor" technology ensures maximum color durability, especially in medium / large sizes: fibers are dyed before being braided, thus guaranteeing greater color absorption. Especially suitable for reel.

ASSO 8X PE LURE BRAID BRAIDED PE

FTASDI301

Asso Lure Braid is a perfectly refined 8-ply braid produced with top quality raw material which ensures quality and performance over time. The "duracolor" technology ensures maximum color durability, especially in medium / large sizes: fibers are dyed before being braided, thus guaranteeing greater color absorption. 8-ply construction for better roundness. Zero stretch even in the micro-sizes. High abrasion resistance even in presence of dense vegetation. Suitable for lure fishing. Especially indicated for reel.

ASSO 8X PE LIGHT GAMES BRAIDED PE

FTASDI326

Asso 8X Light Games is a perfectly refined 8-ply braid made from high density, ultra-thin and resistant PE fibers. This type of fiber provides the braid with a linear and knot strength that is definitely higher-than-average. The new braiding system guarantees extreme solidity even after the most hard frictions. Its high abrasion-resistance is combined with a smooth and silky surface. The round surface guarantees great smoothness with no sound while passing through the rod rings. It is very strong and suitable for all types of fishing conditions. It is multipurpose and available in two colors, suitable for both reel and leaders.

ASSO INVISIBLE CLEAR 100% FLUOROCARBON

FFASDI120 - FFASDI121

Abrasion resistant fluorocarbon line which ensures a long product life. It has a refractive index tending to zero the first meters under water which guarantees almost total invisibility and which allows to increase the catches even for beginners. The high specific weight ensures to hold the fishing position. Extremely waterproof, it allows you to keep the strength unaltered in any situation. It has a low elongation and is totally insensitive to temperatures even in prohibitive climatic conditions. Especially suitable for leaders.

Asso Super Ajing Pe 4x is a 4-ply braid produced with top quality raw material to guarantee top quality and performance over time. The next-gen braiding system makes this product extremely abrasion resistant. It's especially designed for ajing game and other light game techniques. Diameters are very thin and provide high sensitivity, allowing to perceive every bite. The high sensitivity also allows longer casts. It sinks very quickly thanks to the high specific weight of the fibers. Available in orange high visibility coloring. Especially suitable for reel.

ASSO **MAINLINE MASTER** NYLON LINE

FNASDI274

Asso Mainline Master is a fluorocarbon coated nylon monofilament designed to ensure the best performance possible. It encloses in a single product all the most important features that a carp fishing line must have. Its remarkable softness makes it extremely flexible and durable and, thanks to the fluorocarbon coating, it has an extraordinary resistance to abrasion. The higher specific weight compared to a normal nylon and the smooth surface that easily cuts the water make it perfectly sink and rest on the seabed. Thanks to its solid structure it doesn't curl, is tangle-free and has zero stretch. The fluorocarbon coating ensures an extremely smooth surface, guaranteeing easy casting and excellent smoothness. Available in two colors, for every fishing condition. Especially suitable for leaders.

ASSO FC TAPERED LEADER 100% FLUOROCARBON

FFASDI599

Asso Fluorocarbon Tapered Leader is ideal for nymphing and when using large streamers, and sinks much quicker than nylon.
Its high abrasion resistance makes it an ideal choice when fishing in rock, brush and other abrasive environments.
Low vis transparent coloring, high knot strength and very durable. Especially suited for leaders.

ASSO CUORI 100% FLUOROCARBON

FFASDI127

Asso di cuori is a historical line, the very first fluorocarbon line produced in Italy. Its very hard surface makes it very resistant to the teeth of the most stubborn fish and obstacles, while the total impermeability allows the line to maintain its resistance and durability even after several uses in stressful conditions. The smooth surface allows the line to cut the water in two and to remain in position even in conditions of very strong current. Asso di Cuori is perfect for all seasons and temperatures (from + 40 ° c to -20 ° c). The pure fluorocarbon structure makes it invisible in all refraction conditions. Available in a wide range of diameters to cover most fishing techniques. Especially suitable for leaders.

ASSO DIAMOND NYLON LINE

FNASDI063

Asso Diamond is a product that has made the history of the Asso brand since the 1980s. It is a specific line for surfcasting and lure fishing thanks to its exceptional smoothness, still unbeatable today. Extremely soft and pasty, it guarantees exceptional resistance to abrasion and traction. The top quality of the line allows a very long life overtime, even after several uses. It features a typical yellow color with high visibility out of the water which allows optimal control of the fishing area. It is multipurpose and suitable both for reel and leaders.

BRAIDED PE

ASSO 4X PE POWER BRAID BRAIDED PE

FTASDI306-30A

Asso PE 4x Power Braid is a 4-ply braid produced with top quality raw material that guarantees its performance over time. The next-gen "multi-pitch" braiding system makes the fibers semi-rigid and avoids unpleasant tangles on the reel or on the tip of the rod during casting and recovery phases. The advanced coating technology allows longer casts, great durability even in stressful conditions and incredible knot strength. No memory and a minimum stretch percentage. Especially suitable for reel.

Asso 8X Light Games is a perfectly refined 8-ply braid made from high density, ultra-thin and resistant PE fibers. This type of fiber provides the braid with a linear and knot strength that is definitely higher-than-average. The new braiding system guarantees extreme solidity even after the most hard frictions. Its high abrasion-resistance is combined with a smooth and silky surface. The round surface guarantees great smoothness with no sound while passing through the rod rings. It is very strong and suitable for all types of fishing conditions. It is multipurpose and available in two colors, suitable for both reel and leaders.

ASSO MAINLINE COMMERCIAL FISHING

FNASPR199

The revolutionary feature of Asso Mainline is the controlled stretch factor which prevents the flattening of the line and gives better performance and superior durability. It has been specifically designed for mainlines stored on reel. High abrasion resistance and excellent strength/flexibility ratio.

ASSO HARD LINE COMMERCIAL FISHING

FNASPR217

Specially created for branch lines and for those situations where it is necessary to have an extremely abrasion resistant monofilament, particularly rigid and very tenacious.

ASSO LEADER COMMERCIAL FISHING

FNASPR213

Asso Leader is a top quality nylon monofilament perfect for commercial fishing. It's one of the strongest branch lines available on the market characterized not only by its high resistance but also by its excellent softness. Asso Leader encloses in a single product all the most important features that a branch line must have: very high breaking strength, excellent transparency, extra softness and high stretch which facilitates the capture of large prey.

ASSO SUPER BRACCIOLO COMMERCIAL FISHING

FNASPR241

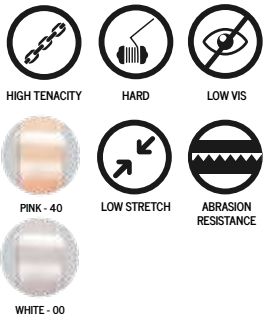

Asso Super Bracciolo is a real novelty in the world of professional fishing. It is a latest generation monofilament created specifically for branch lines. Ideal for the most extreme situations.

- Very high toughness and strength
- Hard
- Low visibility colors. Particularly effective in pink coloring.
- Very high breaking strength and abrasion resistance
- Low elongation
- Long duration

ASSO TRIPLE FORCE COMMERCIAL FISHING

FNASPR229

Asso Triple force is a top quality nylon monofilament suitable for commercial fishing and especially for branch lines. Its outstanding strength and excellent transparency and rigidity make it the best choice for the lower part of the branch line for tuna fishing. It ensures greater abundance of fish thanks to the better presentation of the bait. Asso Triple Force is one of the monofilaments with the highest breaking strength for tuna fishing.
